DIRECTIONS FOR ORDERING

Time, Annoyance and Expense can be Saved by Noting and Following Closely the Suggestions Below:

We will understand all orders and inquiries as calling for **Regular Western Style** and **Sizes** as described in this catalogue, unless specifically ordered otherwise, or unless covered by standing instructions to the contrary.

Be Explicit in ordering. Do not assume that we know what you want.

Always give **width** first, length or height second, then thickness.

Always use inches to designate glass sizes, and feet and inches for openings or outside measurements.

SASH and WINDOW.

The term "Sash" indicates only one piece to fill opening.

The term "Window" indicates two pieces (upper and lower sash).

State size of glass, number of lights, opening (unless regular stock) and thickness. State whether open or glazed, and if glazed whether of single or double strength.

If a window whether check or plain rail.

If segment or circle head give number of style desired (see page 7) and radius of circle or segment if not regular. When not otherwise specified we will understand for Circle Head Style Fig. 2 with a radius one-half the width of the sash less the width of the stile, and for Segment Head Fig. 4 with a radius the width of the sash less the width of the stile.

When an odd sash or window is ordered always give both glass size and number of lights and outside opening, and if possible send sketch.

If glass sizes only are given we will understand that regular stock widths of stiles, rails and bars are required.

Note—All windows and sash are understood to be glazed unless ordered open specifically. All glazed windows are primed or oiled one coat unless otherwise ordered.

DOORS.

In the absence of fuller instructions we will consider an order or inquiry for doors to call for the Standard Four Panel O. G. Door No. 1 quality.

State width, height and thickness, number of panels and arrangement of same and quality.

If molded state whether flush or raised mold one or two sides.

State style of sticking unless O. G. is desired.

If oil finish state whether machine smoothed or hand smoothed is desired.

If odd send sketch or detail.

Odd doors will be made with regular stock widths of stiles, rails, muntins and panels unless specifically ordered otherwise.

OUTSIDE BLINDS.

We will understand all orders for blinds to call for Regular Western Stock Styles and Sizes, 1⅛ inch rolling slats unless specifically ordered otherwise.

State size and number of lights of window for which blinds are ordered, also thickness of blind, and whether all rolling slats (R. S.), stationary slats (S. S.), or half rolling and half stationary (½ R. S. ½ S. S.)

If odd give outside opening, thickness, arrangement of slats and send sketch.

The regular stock blind is the width of the window to be covered and one inch longer.

Orders for brick buildings must so specify, and will in the absence of additional instructions be made two inches longer than window opening.

A blind indicates a single piece to fill opening.

A pair of blinds indicates two pieces to fold together to fill opening.

A set of blinds indicates more than two pieces, and should always be accompanied by sketch.

INSIDE BLINDS.

Inside blinds we will understand are to be made four-fold, 1⅛ inch thick, outside panel and inside slats; made to be cut in the center unless otherwise stated.

Give exact outside opening always, thickness, number of folds and arrangement of panels or slats; always send sketch.

If cut twice or more specify height from top to each cut.

If wanted to fold into box give width of outside folds.

If not the usual arrangement of panels or slats always send sketch.

Something About

BIRCH

"The American Mahogany"

ON THE following pages we show our line of stock Birch and Oak Front and Panel Doors. These doors may be used with different kinds of trim. They are adapted for use with yellow pine, cypress and spruce. The most popular trim is yellow pine. It gives splendid results in a great number of finishes. The natural varnish is pleasing, while the effects in colors such as Flemish brown, weathered, light mission and green Flemish are very rich and handsome. All stains and varnishes should be applied in the usual way familiar to all painters. Birch is susceptible of a very high polish or the soft dead finish which is so popular. It is a close-grained, beautiful wood and during the past few years has grown in favor with the owners of good homes. We list only goods we carry in stock, but can furnish odd sizes and will be pleased to submit estimates.

OAK DOORS

as made by us, and especially our Two-Panel Doors, show a very fine grain effect, and can be finished either natural or in any of the popular shades. These doors and trim are also peculiarly well adapted for staining and can be successfully finished in any shade desired.

A hardwood door once finished is finished forever and is easily cleaned.

A painted door needs painting frequently and is hard to keep clean.

Write for Special Information

PROPER CARE OF HARDWOOD DOORS

Hardwood doors are the highest grade of door manufactured, and should not be handled and exposed like ordinary painted pine doors.

In the making of hardwood doors all parts are thoroughly kiln dried. All wood is porous and if exposed in the white when dry will rapidly absorb moisture.

The absorption of moisture is liable to result in the doors warping, twisting, joints opening or grain raising. Any of these difficulties can be avoided by the exercise of a little care.

As soon as hardwood doors are taken to the building where they are to be used, give them a coat of stain or filler to close the pores of the wood.

Never place hardwood doors in a freshly plastered room. Be sure the plaster is thoroughly dry. When possible dry out the building with artificial heat.

When a door has been fitted and hung, paint the top and bottom edges with a coat of good paint.

Veneered front doors exposed to the weather should be given at least two heavy coats of EXTERIOR VARNISH.

The coats should be applied on ALL EDGES, as well as on the flat surfaces.

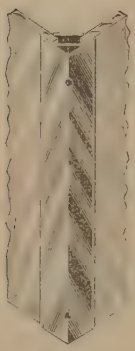
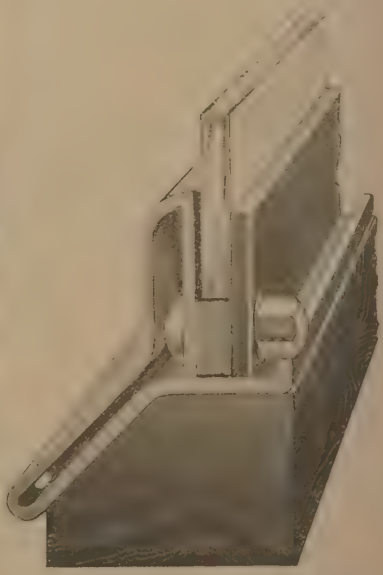
THE THORNE HOLD-FAST PATENT VENTILATING CORNER, TRANSOM and DIVIDING BARS



FRONT VIEW.
ALL BARS SOLID COPPER.

BACK VIEW.
MADE TO FIT ANY ANGLE.

TRANSOM BAR



SOLID COPPER PATENT DRIP CUP

Directions for Ordering Corner, Transom and Dividing Bars

Corner Bars and Transom Bars should be ordered full height of opening. Transom Bars should be ordered the full width of glass.

Where Transom Bars are to be used a rough sketch should be sent showing the size of the glass to be used, so that the Transom Bars can be fitted accordingly.

Directions for Ordering and Setting the Thorne Hold-Fast Metal Construction

INSIDE SETTING

Take off the stop of the Corner Bar and lift out the bolts from bar separately so as not to get them mixed with the bolts and stops belonging to other bars, as the bolts and stops are not all the same length or size for the different angles. (Where transom bars are used, the bolts above and the first bolt below the transom bar are a little longer than the others and should be kept separate.)

Then take off the inside stop of show window base, screw each bar in place at the top and bottom, fit the Plate Glass in place, put back the bolts in the slots and force the glass tight against the rubber on the bolts. (It is always best to block end and return lights same fit into the building so as to make the glass set tight against the rubber on the bolts.)

Put back your stop and as the same is being tightened have a man on the outside to press the bar tight across the glass, as in this way you have a better purchase on the bolt and the bar is drawn into its proper place.

We fit the bars for Plate Glass $\frac{7}{8}$ inch thick. If your glass runs thinner use the brass washers sent with all bolts, provided the $\frac{1}{4}$ inch take up in nut does not tighten enough.

OUTSIDE SETTING

For outside setting take off outside stop of show window base, put the front, return and end lights of Plate Glass in place securing same by nailing small blocks on the outside at the top and bottom.

Then take off the stop of the Corner Bars and put same in place by slipping the bolts through the $\frac{1}{2}$ inch space between the glass from the outside. Screw the top on the same as for inside setting.

This 3/8-inch dressed and matched flooring takes the place of the old fashioned thick flooring; is cheaper in price, easier laid and wears for all time. With ordinary care given hardwood flooring, you do not even wear through the finishing of the floor, let alone wearing out the floor. Consequently, 3/8-inch flooring is supplanting thick floors and is laid on linings to form new floors in new houses.

But, the special features of the 3/8-inch flooring is its adaptability in covering old floors, doing away with the soft floor and carpets, and giving a strictly "hygienic" floor, attractive, beautiful, lasting and finished in the natural wood.

Our flooring is run with a polished surface, tongued and grooved matched ends and holes bored for blind nailing, so that the question of laying and finishing a hardwood floor is now reduced to a minimum, as it is end matched any lengths, however short, can be utilized and the floor laid as substantially as though in one piece.

Maple flooring has no rival for durability and is used in office buildings, schools, public halls, churches, dwellings, stores, etc. Oak flooring, while adapted to all the uses of Maple, is used largely in living rooms, sleeping apartments of the modern house, and is a wood of so much beauty and utility and so well known as to require but little description.

We furnish the Oak flooring in plain and quarter-sawed. Walnut and cherry are handsome woods to lay in conjunction with either Oak or Maple, forming fancy floors, as the cuts on the following pages suggest.

The finishing of hardwood floors is simple and the amount of attention required to keep the floor in perfect order is less than sweeping old fashioned carpets.

DIRECTIONS NECESSARY FOR ORDERING STAIRS and STAIR RAILING.

When a flight of stairs is wanted, we should know the height of story from top of finished floor to top of finished floor, width of joists in second story, width and run of stairs, the size of cylinder, style of base used in the hall, with rough sketch showing about the shape of stairs wanted, and measurements of rooms on first and second floor where stairs are located; measurements taken inside plaster line.

For STAIR RAILING—Straight Flight.

We require the width of rise and step as sawed out on string board, the number of risers, the size of cylinder from face to face of string or face board, which way it turns at head of stairs, and the number of feet of straight rail required at landing. Unless we receive plan showing otherwise, we always suppose the top riser for a straight flight of stairs to be placed at the edge or spring of cylinder.

For CIRCULAR or WINDING STAIRS.

We should have an exact plan of stairs as built, giving the width of rise and step, the location of risers in cylinder, etc.; and, when there are straight steps below or above the cylinder, always give the distance from the first square riser to the edge or spring line of cylinder, on the face of string or face board. *Always write your address in full on the plans.*

The basket is of heavy iron and hangs on the frame, which is also made of heavy cast iron, and the fire brick should be built to fit snugly up to the basket as shown in illustration above. The basket is so made that it is very easy to poke out the ashes. The grate is suitable for burning hard coal, soft coal or wood.

NOTE.—No Fire Brick or Top Tiles are included with the Combination Grate, for the reason that these articles are a common commodity which can be bought in almost any hardware store for less money than we could afford to deliver them, as they are heavy freight. We can furnish Top Tiles at $1.00 each, and Fire Brick at $1.50 per setting, f. o. b. cars Chicago.

The continued use for over ten years of the Double Draft Portable Grates, or Fireplaces, has proven that they are the most *economical, practical* and *satisfactory* fireplaces made. They have the advantage over the regular common brick setting in that they are:

A complete Grate all mounted, ready for setting. They require no fire brick or fire tile in setting. They can be set by any mason. They prevent smoky chimneys and puffing of smoke into the room. The dampers can be so operated as to control the fire. By opening the lower damper which is directly over and close to the fire, it forms a strong direct draft, which as soon as it heats the flue, forms a rapid current of air, thus carrying off the dense smoke. When the fire is well under way, the lower damper can be closed, the upper one remaining open. The heat is then reflected into the room. The upper damper is arranged to close in the summer to prevent dust and soot from coming into the room, and is so constructed as to be opened any desired width to control the fire.

Outfits include: **Facing**—Best quality enameled or unglazed tile (any color).
Hearth—60 x 21 inches; best quality enameled or unglazed tile (any color).

IMPORTANT NOTICE.

When moulding is priced by the inch *it is in all cases understood* that the price is based on ripping width of lumber, that is: ¼ *of an inch wider than the finished size* of moulding. For example: A ⅞ inch thick panel moulding if made to finish 1¾ inches wide, would be charged as 2 inches (being ripping size); to finish full 2 inches, would be charged as 2¼ inches, etc.

Approximate weight of Mouldings, 1x1 inch, per 100 lineal feet, 15 pounds.
